2025

TDA GLOBAL
CYCLING

NORTH AMERICAN EPIC 2025

Thank you for downloading this tour schedule.

Please note that this is an example of the typical schedule for this tour but the official and most up to date schedule, which may contain significant changes, will be sent to registered riders prior to the start of the next trip. Also, please be aware that the first day of cycling for the full tour is indicated on your schedule. We recommend to registered riders that you arrive at least 24 - 48 hours prior to that in order to meet our tour staff and have them help get you and your bicycle ready for the ride.

Elevation

You will see two elevation columns in the itinerary: 'Up (m)' and 'Down (m)' - these are the amount of climbing (up) and descending (down), measured in metres. While factors such as length of stage and road surfaces affect how difficult the climbing is on a particular stage, below is a brief guide to help better comprehend the elevation gains for each stage.

0m – 500m: This can be considered a fairly “flat” day. There are no flat days!

500m – 1500m: This would fit into a moderate to challenging climbing day.

1500m – 2000m: This is a challenging climbing day

over 2000m: These are the highest climbing days - expect longer and/or steep climbs and to be using your smallest gears often

Road Surface

A percentage range of unpaved distance is listed for each stage. Unpaved can mean roads or paths with a surface of dirt, gravel, sand etc. Paved roads also vary in quality, and could have stretches of rough pavement. These measurements can change due to road construction or new routes chosen, but they give an overall view of what to expect. Please see the 'What Bike to Bring' section of the tour page for more detailed information.
